## The Role of Catalysis for the Sustainable Production of Bio-fuels and Bio-chemicals From Brand: Elsevier Science

*The Role of Catalysis for the Sustainable Production of Bio-fuels and Bio-chemicals* describes the importance of catalysis for the sustainable production of biofuels and biochemicals, focused primarily on the state-of-the-art catalysts and catalytic processes expected to play a decisive role in the "green" production of fuels and chemicals from biomass. In addition, the book includes general elements regarding the entire chain of biomass production, conversion, environment, economy, and life-cycle assessment.

Very few books are available on catalysis in production schemes using biomass or its primary conversion products, such as bio-oil and lignin. This book fills that gap with detailed discussions of:

- Catalytic pyrolysis of lignocellulosic biomass
- Hybrid biogasoline by co-processing in FCC units
- Fischer-Tropsch synthesis to biofuels (biomass-to-liquid process)
- Steam reforming of bio-oils to hydrogen

With energy prices rapidly rising, environmental concerns growing, and regulatory apparatus evolving, this book is a resource with tutorial, research, and technological value for chemists, chemical engineers, policymakers, and students.

- Includes catalytic reaction mechanism schemes and gives a clear understanding of catalytic processes
- Includes flow diagrams of bench-, pilot- and industrial-scale catalytic processing units and demonstrates the various process technologies involved, enabling easy selection of the best process
- Incorporates many tables, enabling easy comparison of data based on a critical review of the available literature

## **Editorial Review**

### Review

*"In this reference for academic and industrial researchers, editors Triantafyllidis, Lappas, and Stöcker explore the applications of catalysis to 'green chemistry' processes for the production of sustainable biofuels and bio-chemicals."--Reference & Research Book News, October 2013*

### About the Author

Professor Kostas Triantafyllidis worked as post-doctoral researcher at the Department of Chemistry, Michigan State University, USA (2000-2002). He then joined the Chemical Process Engineering Research Institute (CPERI) of the Centre for Research and Technology-Hellas (CERTH) in Thessaloniki, Greece, as Assistant Researcher (2002-2004). In 2004, he joined the Department of Chemistry at the Aristotle University of Thessaloniki as Lecturer, and since 2009 is Assistant Professor at the same University and Collaborating Faculty Member of CPERI/CERTH.

His research interests focus on the synthesis and characterization of nanoporous materials, organic-inorganic hybrid materials and nanocomposites, heterogeneous & environmental catalysis, thermochemical, catalytic and enzymatic conversion of biomass to fuels and chemicals, adsorption/separation processes. He is the author/co-author of 50 scientific journal publications, of more than 100 publications in conference proceedings and the co-inventor of two patents. He has presented more than 40 lectures in national and international scientific conferences and has participated in more than 20 national and European research projects as scientific coordinator or principal researcher

Angelos Lappas is Research Director at the Chemical Process Engineering Research Institute (CPERI) of the Centre for Research and Technology-Hellas (CERTH). He joined CPERI in 1993 after receiving his BSc and a PhD degree in Chemical Engineering from the Aristotle University of Thessaloniki. Angelos Lappas is in charge of the Laboratory of Environmental Fuels and Hydrocarbons (50 people) in CPERI. He kept positions as teaching assistant in the Aristotle University of Thessaloniki and the Technological Institute of Thessaloniki.

Angelos Lappas has implemented more than 25 EU and National research projects and more than 50 industrial contracts, as scientific coordinator. His research fields are: catalytic reaction engineering, refining processing, biomass thermo-chemical conversion processes, production of reformulated fuels and biofuels, fuel quality and characterization. He specializes in biomass catalytic pyrolysis, fluid catalytic cracking (FCC), isomerization, hydrocracking (HYD) processes, emission control technologies and in catalyst deactivation, testing and evaluation. Angelos Lappas has authored or co-authored 60 publications in ISI scientific journals, more than 100 papers in various symposia and conferences, a book and three chapters in books. He is also co-inventor in one patent.

Michael Stöcker received his Diploma in Chemistry in 1975 and his Dr. rer. nat. degree in 1979 - both from the University of Münster (Germany). He kept positions as Research Assistant at the Universities of Münster (Germany, 1975-1979) and Bergen (Norway, 1980-1982) before he joined the Center for Industrial Research (SI - now SINTEF) in 1982. In 1988-1989 he had a sabbatical leave at the University of British Columbia in

Vancouver (Canada). He is the Emeritus Editor-in-Chief of the scientific journal “Microporous and Mesoporous Materials”, published by Elsevier B.V.

Furthermore, Michael Stöcker kept side positions as Adjunct Professor at the University of Bergen (Norway, 1999-2004) and the Norwegian University for Science and Technology in Trondheim (Norway, 2004-2007).

Michael Stöcker has 30 years experience within the fields of synthesis, characterization and catalytic testing of different type of materials, covering mainly zeolites, micro- and mesoporous materials and oxide materials related to catalysis, sorption technology, surface modification and design of novel processes. Special interests are within spectroscopy (Solid-state NMR, ESR, XPS), micro- and mesoporous materials, zeolites, catalytic cracking, desulphurization, MTO as well as bio-refinery related catalysis.

He is the author or co-author of about 155 scientific journal publications (including 10 review papers and 10 Handbook chapters), and is co-inventor of two patents. Michael Stöcker has co-edited two scientific books. He has presented about 130 lectures on a national and international basis, about 65 of them based on invitations. He has been project manager of a number of larger industrial contract research projects, Norwegian Research Council and EU projects.

He served on the Board (Council) of the International Zeolites Association (IZA - 1998-2004), as Chairman of the IZA Catalysis Commission (1998-2004 - member since 1994) and as a member of the IZA Synthesis Commission (1992-2004). He is a Member of the Editorial Board of the “Journal of Dispersion Science and Technology”.

He received the DGMK 2009 Award of the German Society for Petroleum and Coal Science and Technology.

## **Users Review**

### **From reader reviews:**

#### **Richard Mills:**

The experience that you get from The Role of Catalysis for the Sustainable Production of Bio-fuels and Bio-chemicals will be the more deep you searching the information that hide within the words the more you get enthusiastic about reading it. It doesn't mean that this book is hard to know but The Role of Catalysis for the Sustainable Production of Bio-fuels and Bio-chemicals giving you excitement feeling of reading. The article writer conveys their point in particular way that can be understood by means of anyone who read this because the author of this e-book is well-known enough. This kind of book also makes your personal vocabulary increase well. Making it easy to understand then can go with you, both in printed or e-book style are available. We suggest you for having this The Role of Catalysis for the Sustainable Production of Bio-fuels and Bio-chemicals instantly.

#### **Robert Goddard:**

Playing with family in a very park, coming to see the water world or hanging out with pals is thing that usually you might have done when you have spare time, subsequently why you don't try point that really opposite from that. Just one activity that make you not experiencing tired but still relaxing, trilling like on roller coaster you have been ride on and with addition details. Even you love The Role of Catalysis for the

Sustainable Production of Bio-fuels and Bio-chemicals, you are able to enjoy both. It is fine combination right, you still wish to miss it? What kind of hang type is it? Oh can occur its mind hangout people. What? Still don't have it, oh come on its referred to as reading friends.

### **Carol Ratliff:**

As we know that book is very important thing to add our understanding for everything. By a guide we can know everything we would like. A book is a range of written, printed, illustrated or maybe blank sheet. Every year seemed to be exactly added. This book The Role of Catalysis for the Sustainable Production of Bio-fuels and Bio-chemicals was filled in relation to science. Spend your spare time to add your knowledge about your science competence. Some people has various feel when they reading a new book. If you know how big selling point of a book, you can feel enjoy to read a reserve. In the modern era like at this point, many ways to get book which you wanted.

### **Ronald Smith:**

Some people said that they feel fed up when they reading a guide. They are directly felt that when they get a half regions of the book. You can choose the book The Role of Catalysis for the Sustainable Production of Bio-fuels and Bio-chemicals to make your current reading is interesting. Your own skill of reading talent is developing when you just like reading. Try to choose straightforward book to make you enjoy to study it and mingle the opinion about book and studying especially. It is to be first opinion for you to like to start a book and go through it. Beside that the book The Role of Catalysis for the Sustainable Production of Bio-fuels and Bio-chemicals can to be your friend when you're experience alone and confuse with the information must you're doing of this time.
