From Elsevier Science

Nanomagnetism and Spintronics From Elsevier Science

Spintronics is a newly developing area in the field of magnetism, in which the interplay of magnetism and transport phenomena is studied experimentally and theoretically. This book introduces the recent progresses in the research relating to spintronics.

- * Presents in-depth analysis of this fascinating and technologically important new branch of nanoscience
- * Edited text with contributions from acknowledged leaders in the field
- * This handbook and guide will appeal to students and researchers in the fields of electronic devices and materials

About the Author

Teruya SHINJO is a professor emeritus of Kyoto University, having been engaged in the study of magnetic materials for about 40 years. He is well known from his research on Mossbauer spectroscopy, magnetic thin films and multilayers, and more recently spin-dependent transport phenomena in nanostructured magnetic systems.
