

Statistics for Chemical and Process Engineers: A Modern Approach

By Yuri A.W. Shardt

Statistics for Chemical and Process Engineers: A Modern Approach By Yuri A.W. Shardt

A coherent, concise and comprehensive course in the statistics needed for a modern career in chemical engineering; covers all of the concepts required for the American Fundamentals of Engineering examination.

This book shows the reader how to develop and test models, design experiments and analyse data in ways easily applicable through readily available software tools like MS Excel® and MATLAB®. Generalized methods that can be applied irrespective of the tool at hand are a key feature of the text.

The reader is given a detailed framework for statistical procedures covering:

- · data visualization;
- probability;
- · linear and nonlinear regression;

experimental design (including factorial and fractional factorial designs);
and

· dynamic process identification.

Main concepts are illustrated with chemical- and process-engineering-relevant examples that can also serve as the bases for checking any subsequent real implementations. Questions are provided (with solutions available for instructors) to confirm the correct use of numerical techniques, and templates for use in MS Excel and MATLAB can also be downloaded from extras.springer.com.

With its integrative approach to system identification, regression and statistical theory, *Statistics for Chemical and Process Engineers* provides an excellent means of revision and self-study for chemical and process engineers working in experimental analysis and design in petrochemicals, ceramics, oil and gas, automotive and similar industries and invaluable instruction to advanced

undergraduate and graduate students looking to begin a career in the process industries.

Editorial Review

From the Back Cover

This book shows the reader how to develop and test models, design experiments and analyse data in ways easily applicable through readily available software tools like MS Excel® and MATLAB®. Generalized methods that can be applied irrespective of the tool at hand are a key feature of the text.

The reader is given a detailed framework for statistical procedures covering:

- · data visualization;
- · probability;
- · linear and nonlinear regression;
- experimental design (including factorial and fractional factorial designs); and
- · dynamic process identification.

Main concepts are illustrated with chemical- and process-engineering-relevant examples that can also serve as the bases for checking any subsequent real implementations. Questions are provided (with solutions available for instructors) to confirm the correct use of numerical techniques, and templates for use in MS Excel and MATLAB can also be downloaded from extras.springer.com.

With its integrative approach to system identification, regression and statistical theory, *Statistics for Chemical and Process Engineers* provides an excellent means of revision and self-study for chemical and process engineers working in experimental analysis and design in petrochemicals, ceramics, oil and gas, automotive and similar industries and invaluable instruction to advanced undergraduate and graduate students looking to begin a career in the process industries.

About the Author

Prof. Dr. Yuri A. W. Shardt is currently an assistant professor at the University of Waterloo in the Department of Chemical Engineering, working in the field of process identification and monitoring with an emphasis on the development and industrial implementation of soft sensors. Previously, he worked at the University of Duisburg-Essen in the Institute of Control and Complex Systems (Fachgebiet Automatisierungstechnik und komplexe Systeme, AKS) as an Alexander von Humboldt Fellow. He has written 14 papers appearing in such journals as *Automatica, Journal of Process Control, IEEE Transactions on Industrial Electronics*, and *Industrial and Engineering Chemistry Research* on topics ranging from system identification, soft sensor development, to process control. He has presented his research at numerous conferences and taught various courses in the intersection between statistics, chemical engineering, process control, EXCEL®, and MATLAB®. Prof. Dr. Shardt completed his doctoral degree under the supervision of Prof. Dr. Biao Huang at the University of Alberta. His thesis examined the methods for extracting valuable data for system identification from data historians for application to soft sensor design. In addition to his

academic work, he has spent considerable time in industry working on implementing various process control solutions. He also has interests in linguistics, as well as software internationalisation and localisation.

Users Review

From reader reviews:

Mark Fetter:

The book Statistics for Chemical and Process Engineers: A Modern Approach make one feel enjoy for your spare time. You need to use to make your capable much more increase. Book can to get your best friend when you getting strain or having big problem with your subject. If you can make looking at a book Statistics for Chemical and Process Engineers: A Modern Approach to get your habit, you can get a lot more advantages, like add your current capable, increase your knowledge about several or all subjects. You may know everything if you like open up and read a e-book Statistics for Chemical and Process Engineers: A Modern Approach. Kinds of book are a lot of. It means that, science book or encyclopedia or others. So , how do you think about this guide?

Jason Villalobos:

In this 21st century, people become competitive in each and every way. By being competitive now, people have do something to make these survives, being in the middle of often the crowded place and notice through surrounding. One thing that occasionally many people have underestimated it for a while is reading. That's why, by reading a publication your ability to survive boost then having chance to endure than other is high. To suit your needs who want to start reading a new book, we give you this kind of Statistics for Chemical and Process Engineers: A Modern Approach book as basic and daily reading book. Why, because this book is greater than just a book.

Patricia Henderson:

The guide with title Statistics for Chemical and Process Engineers: A Modern Approach has a lot of information that you can find out it. You can get a lot of benefit after read this book. This particular book exist new expertise the information that exist in this reserve represented the condition of the world currently. That is important to yo7u to understand how the improvement of the world. This kind of book will bring you inside new era of the the positive effect. You can read the e-book in your smart phone, so you can read this anywhere you want.

Matthew Haley:

Reading a book being new life style in this year; every people loves to examine a book. When you examine a book you can get a large amount of benefit. When you read guides, you can improve your knowledge, since book has a lot of information into it. The information that you will get depend on what types of book that you have read. If you want to get information about your study, you can read education books, but if you act like you want to entertain yourself look for a fiction books, this sort of us novel, comics, along with soon. The Statistics for Chemical and Process Engineers: A Modern Approach offer you a new experience in

looking at a book.
