Computational Auditory Scene Analysis: Principles, Algorithms, and Applications

From Wiley-IEEE Press

Computational Auditory Scene Analysis: Principles, Algorithms, and Applications From Wiley-IEEE Press

How can we engineer systems capable of "cocktail party" listening?

Human listeners are able to perceptually segregate one sound source from an acoustic mixture, such as a single voice from a mixture of other voices and music at a busy cocktail party. How can we engineer "machine listening" systems that achieve this perceptual feat?

Albert Bregman's book Auditory Scene Analysis, published in 1990, drew an analogy between the perception of auditory scenes and visual scenes, and described a coherent framework for understanding the perceptual organization of sound. His account has stimulated much interest in computational studies of hearing. Such studies are motivated in part by the demand for practical sound separation systems, which have many applications including noise-robust automatic speech recognition, hearing prostheses, and automatic music transcription. This emerging field has become known as computational auditory scene analysis (CASA).

Computational Auditory Scene Analysis: Principles, Algorithms, and Applications provides a comprehensive and coherent account of the state of the art in CASA, in terms of the underlying principles, the algorithms and system architectures that are employed, and the potential applications of this exciting new technology. With a Foreword by Bregman, its chapters are written by leading researchers and cover a wide range of topics including:

- Estimation of multiple fundamental frequencies
- Feature-based and model-based approaches to CASA
- Sound separation based on spatial location
- Processing for reverberant environments
- Segregation of speech and musical signals
- Automatic speech recognition in noisy environments
- Neural and perceptual modeling of auditory organization

The text is written at a level that will be accessible to graduate students and researchers from related science and engineering disciplines. The extensive

bibliography accompanying each chapter will also make this book a valuable reference source. A web site accompanying the text, http://www.casabook.org, features software tools and sound demonstrations.

About the Author
Editors **DeLIANG WANG** and **GUY J. BROWN** are well-known for their contributions to the development of CASA. Wang is a Professor in the Department of Computer Science and Engineering and the Center for Cognitive Science at The Ohio State University. He is an IEEE Fellow. Brown is a Senior Lecturer in the Department of Computer Science at the University of Sheffield, UK.

Users Review

From reader reviews:

Leslie Padilla:

The experience that you get from Computational Auditory Scene Analysis: Principles, Algorithms, and Applications could be the more deep you digging the information that hide in the words the more you get interested in reading it. It doesn't mean that this book is hard to be aware of but Computational Auditory Scene Analysis: Principles, Algorithms, and Applications giving you buzz feeling of reading. The writer conveys their point in certain way that can be understood by simply anyone who read the idea because the author of this publication is well-known enough. This particular book also makes your personal vocabulary increase well. That makes it easy to understand then can go along with you, both in printed or e-book style are available. We propose you for having this kind of Computational Auditory Scene Analysis: Principles, Algorithms, and Applications instantly.

Robert Mills:

The book with title Computational Auditory Scene Analysis: Principles, Algorithms, and Applications has a lot of information that you can learn it. You can get a lot of benefit after read this book. This kind of book exist new understanding the information that exist in this publication represented the condition of the world today. That is important to yo7u to know how the improvement of the world. This book will bring you with new era of the internationalization. You can read the e-book with your smart phone, so you can read this anywhere you want.

Vincent Humphreys:

A lot of people always spent their very own free time to vacation or even go to the outside with them family or their friend. Were you aware? Many a lot of people spent they free time just watching TV, or maybe playing video games all day long. In order to try to find a new activity honestly, that is look different you can read some sort of book. It is really fun to suit your needs. If you enjoy the book you read you can spent the entire day to reading a guide. The book Computational Auditory Scene Analysis: Principles, Algorithms, and Applications it is rather good to read. There are a lot of people that recommended this book. We were holding enjoying reading this book. In case you did not have enough space to create this book you can buy the e-book. You can m0ore quickly to read this book through your smart phone. The price is not too expensive but this book possesses high quality.

Nancy Sherman:

Playing with family in the park, coming to see the coastal world or hanging out with good friends is thing that usually you will have done when you have spare time, subsequently why you don't try issue that really opposite from that. A single activity that make you not sensation tired but still relaxing, trilling like on roller coaster you are ride on and with addition info. Even you love Computational Auditory Scene Analysis: Principles, Algorithms, and Applications, it is possible to enjoy both. It is good combination right, you still need to miss it? What kind of hang type is it? Oh come on its mind hangout people. What? Still don't get it, oh come on its referred to as reading friends.
