Forest Ecology (3rd Edition) By James P. Kimmins

This management-driven, comprehensive book on ecosystem ecology is the only one on the market that covers the entire field, linking conventional ecosystem-level forest ecology to forest management. It features ecological site classification, ecosystem modeling, and strong sections on ecological diversity and the physical environment. It provides a comprehensive treatment of forestry issues; as well as excellent coverage of ecosystem management, landscape management, natural disturbances and their emulation. An excellent reference work for professional foresters, resource managers, wildlife managers, parks managers, forest planners and policy makers, and forestry researchers.

Editorial Review

From the Publisher

Forest Ecology uses an ecosystem approach to understanding the ecology of forests. It examines the form and function of forest ecosystems and how they change over time in response to natural and human-caused disturbances.

About the Author

James Peter Kimmins Following an undergraduate degree in Forestry from the University of Wales and an M.Sc. in Forest Entomology from the University of California at Berkeley, James Peter Kimmins, generally known as Hamish, received his PhD in Forest Ecology at Yale University, focusing on the relationship between ecosystem function and herbivore population dynamics. Since 1969 he has been a Professor of Forest Ecology at the University of British Columbia, where he has presented courses on forest ecology, ecosystem classification, ecological aspects of silviculture, environmental issues in forestry, ecosystem function and response to disturbance, and modeling forest ecosystems to undergraduates, graduate students and professional foresters. He has developed and currently tutors a UBC web-based Distance Education course in Forest Ecology. The fifty-three graduate students he has supervised over the past thirty-five years have studied nearly all aspects of forest ecology from ecophysiology to nutrient cycling and production ecology, to succession, landscape ecology and modeling.

For the past twenty-six years, Dr. Kimmins has worked to develop ecologically-based forest ecosystem management models, from the spatially-explicit, individual tree stand model FORCEE, to the a-spatial stand model FORECAST, to the spatial, local landscape, complex disturbance patch model LLEMS, and the spatial watershed ecosystem management model POSSIBLE FOREST FUTURES. These models range from a high school education forest management game (FORTOON), to decision support and research tools, to scenario analysis and value tradeoff assessment tools. He is currently a Senior Canada Research Chair in Modeling the Sustainability of Forest Ecosystems, and is Director of the Forest Ecosystem Management Modeling Group in the Department of Forest Sciences. Dr. Kimmins is a member of UNESCO's World Commission on the Ethics of Science and Technology (COMEST). and serves on many science advisory boards.
