## Digital Fabrication in Architecture, Engineering and Construction By Luca Caneparo

Digital technologies are changing the relationship between design and construction: with computer models, CAD/CAM, and prototyping, designers can gain direct control of building and construction processes. The ability to digitally model designs, and thus to use those models directly in the context of production, creates a synthesis between design and construction in keeping with the tradition of the close relationship between design and craftsmanship, between the quality of the design and the rules of the craft.

The evolution of the culture of design and construction is the underlying theme of this book. The aim is to discuss the direction that innovation is now taking, with a particular focus on today's cutting-edge architectures. The method addresses the ways in which different societies have dealt with the issues of their age regarding design and construction, the different contributions provided by various techniques, and with them the meanings expressed by the architecture. As building design using digital tools requires specific skills in the fabrication processes and in the languages used by information technology, the book also offers a practical guide to new methods and techniques of managing and controlling fabrication for AEC. A systematic analysis of new skills used in the design process presents an overview of opportunities for architects and engineers. By collecting information on significant projects and analyzing them, the book explores the technical and artistic potential of digital technology. The cases studied are the outcomes of groundbreaking projects which were able to give form and significance to technological research. They show that digital tools are not the exclusive prerogative of large firms but can also be adopted by teams working across small and medium-sized firms – firms which have been able to use informed research to link innovative design with the possibilities offered by digital fabrication in architecture.

### **Editorial Review**

Review

From the reviews:

“The new book Digital Fabrication in Architecture, Engineering and Construction by Luca Caneparo is a much needed book to spread the light of knowledge on digital design and its impact on the construction industry. ... The whole book is a detailed description of the digitalization process and introduces readers to the technical terms and describes it briefly. This immaculately referenced and deftly researched book should take place in bookshelf of every academician, library and teachers of this field.” (Book Review (Jadavpur University), January-March, 2014)

From the Back Cover

Digital technologies are changing the relationship between design and construction: with computer models, CAD/CAM, and prototyping, designers can gain direct control of building and construction processes. The ability to digitally model designs, and thus to use those models directly in the context of production, creates a synthesis between design and construction in keeping with the tradition of the close relationship between design and craftsmanship, between the quality of the design and the rules of the craft.

The evolution of the culture of design and construction is the underlying theme of this book. The aim is to discuss the direction that innovation is now taking, with a particular focus on today's cutting-edge architectures. The method addresses the ways in which different societies have dealt with the issues of their age regarding design and construction, the different contributions provided by various techniques, and with them the meanings expressed by the architecture.

As building design using digital tools requires specific skills in the fabrication processes and in the languages used by information technology, the book also offers a practical guide to new methods and techniques of managing and controlling fabrication for AEC. A systematic analysis of new skills used in the design process presents an overview of opportunities for architects and engineers.

By collecting information on significant projects and analyzing them, the book explores the technical and artistic potential of digital technology. The cases studied are the outcomes of groundbreaking projects which were able to give form and significance to technological research. They show that digital tools are not the exclusive prerogative of large firms but can also be adopted by teams working across small and medium-sized firms – firms which have been able to use informed research to link innovative design with the possibilities offered by digital fabrication in architecture.

### **Users Review**

**From reader reviews:**

**Kerri Goodman:**

Now a day people that Living in the era just where everything reachable by connect to the internet and the resources within it can be true or not require people to be aware of each facts they get. How a lot more to be smart in obtaining any information nowadays? Of course the correct answer is reading a book. Looking at a

book can help folks out of this uncertainty Information mainly this Digital Fabrication in Architecture, Engineering and Construction book because book offers you rich details and knowledge. Of course the info in this book hundred percent guarantees there is no doubt in it you may already know.

**Nakia Schultz:**

Are you kind of busy person, only have 10 as well as 15 minute in your day to upgrading your mind proficiency or thinking skill actually analytical thinking? Then you are having problem with the book than can satisfy your short period of time to read it because all of this time you only find reserve that need more time to be go through. Digital Fabrication in Architecture, Engineering and Construction can be your answer as it can be read by an individual who have those short extra time problems.

**Jeffrey Garner:**

This Digital Fabrication in Architecture, Engineering and Construction is new way for you who has intense curiosity to look for some information since it relief your hunger associated with. Getting deeper you onto it getting knowledge more you know or you who still having bit of digest in reading this Digital Fabrication in Architecture, Engineering and Construction can be the light food to suit your needs because the information inside this book is easy to get through anyone. These books build itself in the form which can be reachable by anyone, yep I mean in the e-book web form. People who think that in reserve form make them feel sleepy even dizzy this book is the answer. So you cannot find any in reading a book especially this one. You can find what you are looking for. It should be here for anyone. So , don't miss it! Just read this e-book variety for your better life and also knowledge.

**Richard Vedder:**

That reserve can make you to feel relax. This specific book Digital Fabrication in Architecture, Engineering and Construction was colorful and of course has pictures around. As we know that book Digital Fabrication in Architecture, Engineering and Construction has many kinds or variety. Start from kids until teens. For example Naruto or Private eye Conan you can read and believe you are the character on there. So , not at all of book are make you bored, any it makes you feel happy, fun and rest. Try to choose the best book for yourself and try to like reading that will.
