Pulse Chemistry and Technology: RSC By Brijesh Tiwari, Narpinder Singh

Like cereal, pulse processing is one of the oldest and most important of all food processing, which encompasses a diverse range of products. Pulses are widely grown throughout the world and their dietary and economic importance is globally appreciated and well recognized. Although cereal processing has several dedicated text books, no dedicated text on pulse processing is currently available for food science and technology graduates. This book aims to address this oversight, starting with a chapter highlighting the importance of pulses, their production and consumption trends. The coverage in subsequent chapters provides details on the physical and chemical characteristics of pulses, starches, proteins and minor constituents in them and then how they are processed and used. Cooking quality, analysis and the value of the food products will all be examined with the final chapter reviewing the regulatory and legislative requirements for pulses. This book will serve as a comprehensive text book for undergraduate and postgraduate students, educators, industry personnel involved with grain processing and to some extent researchers providing an up-to-date insight into pulse science, processing and technology.

Editorial Review

Review

The chapters are easy to read and not too long.

...it is a concise text, considering the breadth of coverage. The authors are both experts in their field....and their aim was to provide a thorough review of pulse chemistry and technology, which they have achieved. The book will benefit anyone researching or working with pulses, and will be useful more generally for food scientists and lecturers in food science at university level, and is a must for libraries. (Arthur Tatham www.chemistryworld.org/nov2013/page 59)

Pulses form a major part of the diet in populations in developing countries and their high protein content and associated health benefits means they are increasingly being utilised in more developed countries. Opening with a description of pulse grain structure (and pulse diversity), major and minor constituents, proteins and starch, this book then covers pulse seed properties, post-harvest handling and processing. There is an interesting discussion of pulse production economics, planting and trading, their effects on pricing for developing countries and the future of pulse production. The chapters are easy to read and not too long. The illustrations are generally of a good quality and at 310 pages it is a concise text, considering the breadth of coverage. The authors are both experts in their field, with extensive publications within this subject area and their aim was to provide a thorough review of pulse chemistry and technology, which they have achieved. Pulse chemistry and technology is a comprehensive reference source and the first to bring together all aspects of pulse structure, composition and processing. The chapters are logically ordered and developed, the references for each chapter are extensive and the subject index is comprehensive. The chapters on processing and producing protein isolates and concentrates are particularly relevant to the food industry, given these products are used in a range of different foods and their use will probably increase in processed foods, given their macro and micronutrient contents. The book will benefit anyone researching or working with pulses, and will be useful more generally for food scientists and lecturers in food science at university level, and is a must for libraries. (Arthur Tatham www.chemistryworld.org/nov2013/page 59)

From the Back Cover

Like cereal, pulse processing is one of the oldest and most important of all food processing, which encompasses a diverse range of products. Pulses are widely grown throughout the world and their dietary and economic importance is globally appreciated and well recognized. Although cereal processing has several dedicated text books, no dedicated text on pulse processing is currently available for food science and technology graduates. About the Author

Brijesh Tiwari is a Lecturer of Food Engineering in the Department of Food and Consumer Technology at Manchester Metropolitan University, UK. Prior to joining this University, he was a Lecturer in Biosystems Engineering at University College Dublin in Ireland where he also obtained his PhD. He received his MSc in

Food Technology from CFTRI in India. After a brief period working as a production manager in the Soymilk processing industry, he moved to The Indian Institute of Crop Processing Technology as a Research Scientist where for two years he was actively involved in developing and teaching across the portfolio in grain processing for the food industry. He was also responsible for numerous consultancy assignments, technology transfer projects and the management of a number of industry focused research projects. His main research accomplishments are in the areas of novel food processing and preservation technologies, grain processing and mathematical modelling of food processes. To date he has published over fifty peer review journal articles, twenty book chapters and presented over thirty conference papers at key international research conferences. He has also co-edited four books and is a Series Editor for IFST Food Science & Technology. Narpinder Singh is a Professor of Food Technology in the Department of Food Science and Technology, Guru Nanak Dev University Amritsar, India and also holds the position of Dean in the Faculty of Applied Sciences. He has been teaching and working in research for about 22 years and he is a Fellow of the Indian National Science Academy and a Fellow of the National Academy of Agricultural Sciences. During the course of his work, he has managed research projects funded by various agencies, guided the research of several PhD students and worked as Visiting Scientist at Institute of Food Research, Norwich, UK and Visiting Professor at Osaka City University, Japan, Kansas State University, USA and University of East Anglia, UK. He has published 155 research papers, has six book chapters to his credit and has presented his work at many key international research conferences.

Users Review

From reader reviews:

Marcus Galvan:

Reading a e-book tends to be new life style within this era globalization. With studying you can get a lot of information that can give you benefit in your life. Together with book everyone in this world can easily share their idea. Publications can also inspire a lot of people. Many author can inspire their very own reader with their story or their experience. Not only the story that share in the ebooks. But also they write about the ability about something that you need illustration. How to get the good score toefl, or how to teach your young ones, there are many kinds of book that you can get now. The authors nowadays always try to improve their ability in writing, they also doing some study before they write with their book. One of them is this Pulse Chemistry and Technology: RSC.

Paul Cockrell:

Pulse Chemistry and Technology: RSC can be one of your basic books that are good idea. All of us recommend that straight away because this e-book has good vocabulary which could increase your knowledge in vocabulary, easy to understand, bit entertaining but nonetheless delivering the information. The writer giving his/her effort that will put every word into joy arrangement in writing Pulse Chemistry and Technology: RSC but doesn't forget the main stage, giving the reader the hottest and based confirm resource details that maybe you can be one of it. This great information can drawn you into brand-new stage of crucial considering.

Kathleen Bonds:

Don't be worry for anyone who is afraid that this book will certainly filled the space in your house, you could

have it in e-book means, more simple and reachable. This Pulse Chemistry and Technology: RSC can give you a lot of buddies because by you taking a look at this one book you have point that they don't and make you more like an interesting person. This particular book can be one of one step for you to get success. This reserve offer you information that possibly your friend doesn't understand, by knowing more than some other make you to be great folks. So , why hesitate? We should have Pulse Chemistry and Technology: RSC.

Sandra Brown:

That reserve can make you to feel relax. That book Pulse Chemistry and Technology: RSC was colourful and of course has pictures on the website. As we know that book Pulse Chemistry and Technology: RSC has many kinds or genre. Start from kids until teens. For example Naruto or Private investigator Conan you can read and think you are the character on there. So , not at all of book usually are make you bored, any it offers you feel happy, fun and loosen up. Try to choose the best book in your case and try to like reading this.
