## Vibration-based Condition Monitoring: Industrial, Aerospace and Automotive Applications By Robert Bond Randall

*"Without doubt the best modern and up-to-date text on the topic, written by one of the world leading experts in the field. Should be on the desk of any practitioner or researcher involved in the field of Machine Condition Monitoring"* Simon Braun, Israel Institute of Technology

Explaining complex ideas in an easy to understand way, Vibration-based Condition Monitoring provides a comprehensive survey of the application of vibration analysis to the condition monitoring of machines. Reflecting the natural progression of these systems by presenting the fundamental material and then moving onto detection, diagnosis and prognosis, Randall presents classic and state-of-the-art research results that cover vibration signals from rotating and reciprocating machines; basic signal processing techniques; fault detection; diagnostic techniques, and prognostics.

Developed out of notes for a course in machine condition monitoring given by Robert Bond Randall over ten years at the University of New South Wales, Vibration-based Condition Monitoring: Industrial, Aerospace and Automotive Applications is essential reading for graduate and postgraduate students/researchers in machine condition monitoring and diagnostics as well as condition monitoring practitioners and machine manufacturers who want to include a machine monitoring service with their product.

- Includes a number of exercises for each chapter, many based on Matlab, to illustrate basic points as well as to facilitate the use of the book as a textbook for courses in the topic.
- Accompanied by a website [www.wiley.com/go/randall](http://www.wiley.com/go/randall) housing exercises along with data sets and implementation code in Matlab for some of the methods as well as other pedagogical aids.
- Authored by an internationally recognised authority in the area of condition monitoring.

### **Users Review**

**From reader reviews:**

**Christian Fowler:**

In other case, little people like to read book Vibration-based Condition Monitoring: Industrial, Aerospace and Automotive Applications. You can choose the best book if you appreciate reading a book. Given that we know about how is important the book Vibration-based Condition Monitoring: Industrial, Aerospace and Automotive Applications. You can add information and of course you can around the world with a book. Absolutely right, due to the fact from book you can know everything! From your country until eventually foreign or abroad you will be known. About simple issue until wonderful thing you are able to know that. In this era, we can easily open a book or maybe searching by internet unit. It is called e-book. You need to use it when you feel fed up to go to the library. Let's go through.

**James Murray:**

This Vibration-based Condition Monitoring: Industrial, Aerospace and Automotive Applications are generally reliable for you who want to be considered a successful person, why. The explanation of this Vibration-based Condition Monitoring: Industrial, Aerospace and Automotive Applications can be one of several great books you must have is actually giving you more than just simple reading through food but feed you actually with information that perhaps will shock your previous knowledge. This book is definitely

handy, you can bring it everywhere and whenever your conditions both in e-book and printed ones. Beside that this Vibration-based Condition Monitoring: Industrial, Aerospace and Automotive Applications forcing you to have an enormous of experience including rich vocabulary, giving you trial run of critical thinking that we know it useful in your day activity. So , let's have it and enjoy reading.

**Virgil Santamaria:**

Reading a book can be one of a lot of exercise that everyone in the world likes. Do you like reading book so. There are a lot of reasons why people love it.
