Molecular Biology of Cancer: Mechanisms, Targets, and Therapeutics By Lauren Pecorino

Cells in our body undergo tightly regulated replication to enable growth to occur in a precise, and to ensure that damaged or worn out tissues are replaced. Regulation is mediated via many different mechanisms; it is when these mechanisms fail, and regulation is lost, that cancer can result. Recent advances in molecular cell biology have greatly expanded our understanding of the processes and mechanisms that underpin the regulation of cell replication, and what is happening at the molecular level when these fail.

The third edition of *The Molecular Biology of Cancer: Mechanisms, Targets, and Therapeutics* offers a fresh approach to the study of the molecular basis of cancer, by showing how our understanding of the defective mechanisms that drive cancer is leading to the development of new targeted therapeutic agents.

Opening with an overview of the key hallmarks of cancer as a disease state, the book then leads us through the principal processes that become altered in cancer cells, and explains how the failure of these processes can lead to the onset of cancer.

Uniquely, within each chapter, students are shown how this molecular knowledge is being applied to develop new targeted therapeutic strategies.

Written with students in mind, the book features a variety of learning features to help students engage with, and master, the concepts presented. The emphasis is not on exhaustive coverage of the field, but on acquiring a solid understanding of the essentials of the subject--and an appreciation of how a theoretical understanding can be transformed into therapeutic benefit.

The Molecular Biology of Cancer is an invaluable resource for any student wishing to gain an insight into the molecular basis of the disease--and uncover possible solutions for its effective control.

COMPANION WEBSITE (www.oup.com/uk/orc/bin/9780199577170)

For students:

- * Hyperlinks to primary literature articles featured in the text
- * News feeds relevant to cancer biology, drawn from a variety of publications
- * A web link library, giving access to relevant online resources

For instructors:

- * Downloadable figures from the book
- * A Test Bank of questions, with feedback linked to the book, for use in formative or summative assessment (password-protected)

Editorial Review

Review

"The book's special appeal lies in its ability to stimulate both learning and investigation, which I hope will be its lasting legacy." Dr Graham Godfrey -*The Biologist*.

"Beautifully illustrated book. ...one of the best student texts on the molecular and cellular aspects of cancer available."--Times Higher Education Supplement

Users Review

From reader reviews:

Donna Hufnagel:

Do you one of people who can't read satisfying if the sentence chained in the straightway, hold on guys this kind of aren't like that. This Molecular Biology of Cancer: Mechanisms, Targets, and Therapeutics book is readable by you who hate the straight word style. You will find the information here are arrange for enjoyable looking at experience without leaving perhaps decrease the knowledge that want to offer to you. The writer connected with Molecular Biology of Cancer: Mechanisms, Targets, and Therapeutics content conveys objective easily to understand by most people. The printed and e-book are not different in the content but it just different as it. So , do you even now thinking Molecular Biology of Cancer: Mechanisms, Targets, and Therapeutics is not loveable to be your top record reading book?

Ruth Mullins:

This Molecular Biology of Cancer: Mechanisms, Targets, and Therapeutics are usually reliable for you who want to become a successful person, why. The key reason why of this Molecular Biology of Cancer: Mechanisms, Targets, and Therapeutics can be among the great books you must have is usually giving you more than just simple studying food but feed you actually with information that might be will shock your before knowledge. This book is usually handy, you can bring it almost everywhere and whenever your conditions in e-book and printed ones. Beside that this Molecular Biology of Cancer: Mechanisms, Targets,

and Therapeutics giving you an enormous of experience including rich vocabulary, giving you trial run of critical thinking that we all know it useful in your day task. So , let's have it and revel in reading.

Dianne Haire:

People live in this new day of lifestyle always try and and must have the extra time or they will get great deal of stress from both way of life and work. So , when we ask do people have spare time, we will say absolutely indeed. People is human not only a robot. Then we request again, what kind of activity do you have when the spare time coming to you of course your answer can unlimited right. Then do you ever try this one, reading guides. It can be your alternative with spending your spare time, the book you have read is Molecular Biology of Cancer: Mechanisms, Targets, and Therapeutics.

Frances McKay:

Don't be worry when you are afraid that this book will filled the space in your house, you may have it in e-book way, more simple and reachable. This particular Molecular Biology of Cancer: Mechanisms, Targets, and Therapeutics can give you a lot of pals because by you checking out this one book you have point that they don't and make anyone more like an interesting person. This kind of book can be one of a step for you to get success. This e-book offer you information that perhaps your friend doesn't learn, by knowing more than various other make you to be great folks. So , why hesitate? Let's have Molecular Biology of Cancer: Mechanisms, Targets, and Therapeutics.
