The Use of Economic Valuation in Environmental Policy: Providing Research Support for the Implementation of EU Water Policy Under Aquastress (Routledge Explorations in Environmental Economics) From Routledge

This book aims to show that economics in general and non-market valuation methods in particular, together with participatory and engineering tools, can facilitate the design and implementation of the different European policies in relation to mitigation of water stress. The results presented in this book derive from AquaStress, an EU funded integrated project, delivering interdisciplinary methodologies to help mitigate water stress problems. The project draws on both academic and practitioner skills to generate knowledge in technological, operational management, policy, socio-economic, and environmental domains.

The book is divided in three parts and as the AquaStress project, is case study driven. Part I begins with a review of the up-to-date use of non-market valuation economic methods in the design and implementation of EU water policies. Part II of the book proceeds to discuss and analyze participatory and engineering tools that can facilitate the determination of efficient water resources policies and the consequent implementation of the EU WFD, using case studies of test sites from Bulgaria, Italy, Morocco and Poland. Part III of the book, brings us back to the use of economic tools and focuses on policy appraisal through social cost-benefit analyses and the choice/estimation of the socially efficient discount rate to be used in such analyses. The book concludes with specific policy recommendations for all case-studies considered in previous chapters.

This work would be of most interest to water resources managers and policy makers as well as consultants working on the implementation of the WFD. It would also be helpful to students and scholars of water resource management.

Editorial Review

Review

'This book will be of most interest to individuals interested in the use of 'economics' to understand environmental problems with economic tools, both theoretical and applied'.

- Robert E. Wright, University of Strathclyde, UK

About the Author

Phoebe Koundouri has been an Assistant Professor at DIEES, Athens University of Economics and Business since 2005.

Users Review

From reader reviews:

Diane Adams:

Do you have favorite book? When you have, what is your favorite's book? E-book is very important thing for us to understand everything in the world. Each e-book has different aim as well as goal; it means that reserve has different type. Some people really feel enjoy to spend their time and energy to read a book. They can be reading whatever they have because their hobby is reading a book. Consider the person who don't like looking at a book? Sometime, person feel need book after they found difficult problem as well as exercise. Well, probably you will want this *The Use of Economic Valuation in Environmental Policy: Providing Research Support for the Implementation of EU Water Policy Under Aquastress (Routledge Explorations in Environmental Economics)*.

Stephen Mosley:

Reading a book being new life style in this 12 months; every people loves to study a book. When you study a book you can get a great deal of benefit. When you read guides, you can improve your knowledge, simply because book has a lot of information on it. The information that you will get depend on what sorts of book that you have read. If you wish to get information about your review, you can read education books, but if you act like you want to entertain yourself read a fiction books, these us novel, comics, and soon. The *The Use of Economic Valuation in Environmental Policy: Providing Research Support for the Implementation of EU Water Policy Under Aquastress (Routledge Explorations in Environmental Economics)* provide you with new experience in reading through a book.

Henry Baker:
